Experiment – 16

Virtual Machine Cloning

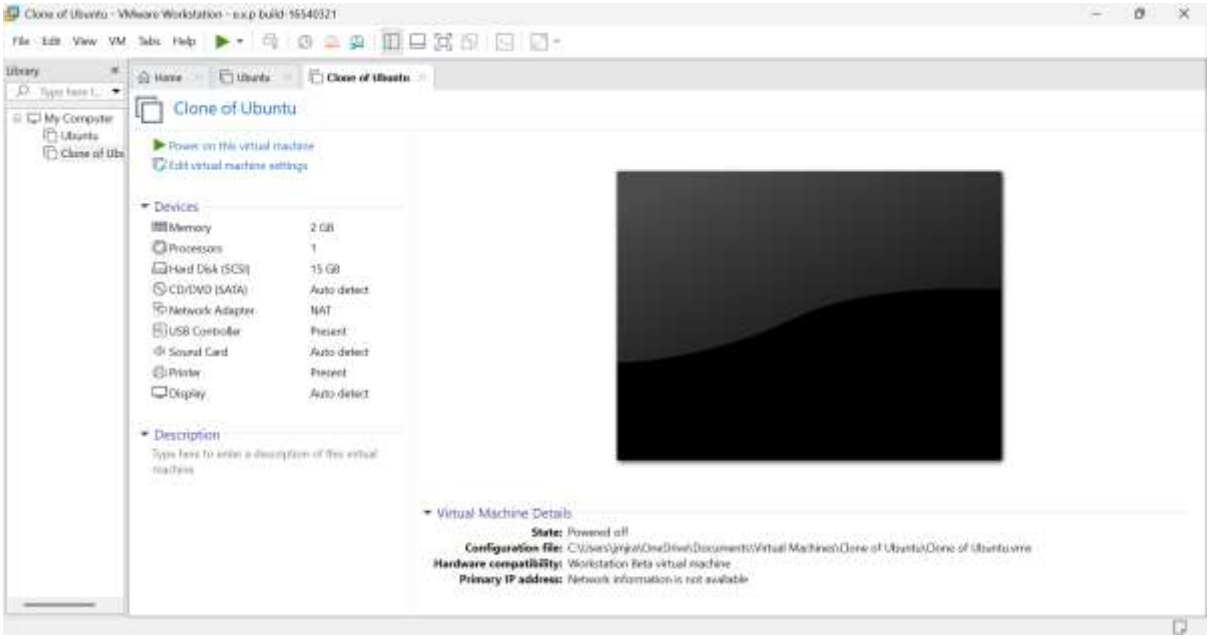

Aim

To clone a Virtual Machine using VMware Workstation and test its functionality by loading the cloned VM.

Procedure

1. Open VMware Workstation on the host computer.
2. Select the virtual machine to be cloned.
3. Shut down the virtual machine.
4. Open the VM menu and select Manage.
5. Click Clone to start the cloning process.
6. Select the current state of the virtual machine as the cloning source.
7. Choose Full Clone or Linked Clone.
8. Enter the name and storage location for the cloned VM.
9. Click Finish to complete the cloning process.
10. Start the cloned VM and verify that it works correctly.

Output

Result

Thus, a Virtual Machine was successfully cloned using VMware Workstation, and the cloned VM was started and tested successfully.
