Experiment – 15

VM Snapshot Management

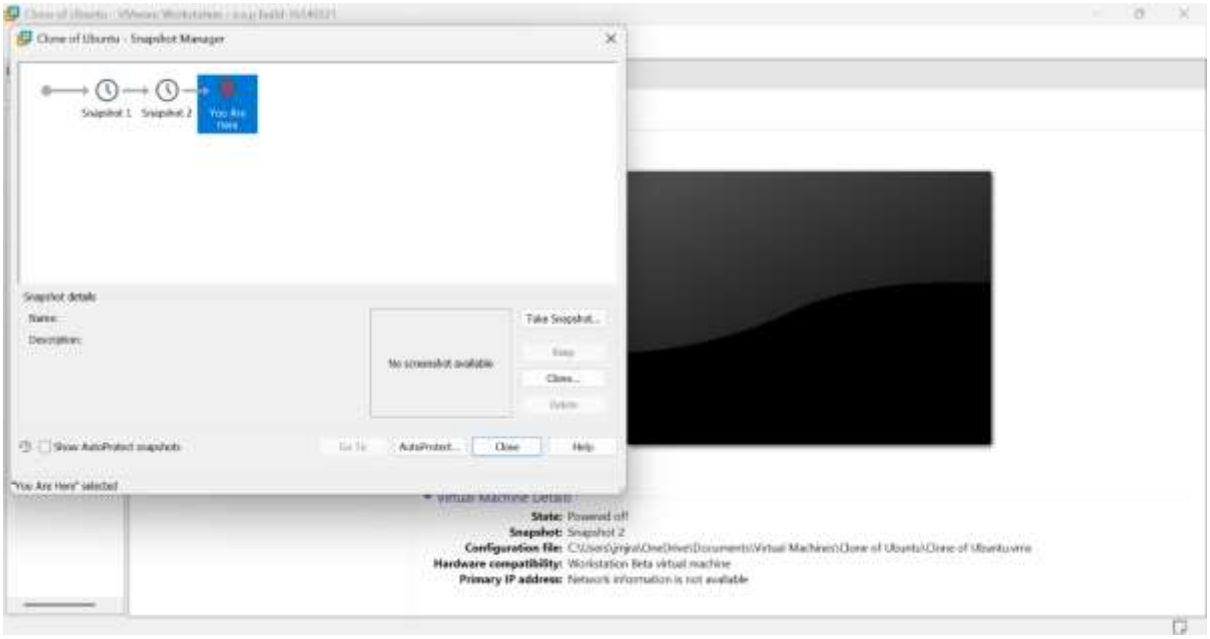

Aim

To create a snapshot of a Virtual Machine and test it by restoring the previous version or using a cloned VM in VMware Workstation.

Procedure

1. Open VMware Workstation on the host computer.
2. Select the required virtual machine.
3. Power on the virtual machine and make some changes.
4. Shut down the virtual machine if required.
5. Open the VM menu and select Snapshots.
6. Click Take Snapshot and enter a snapshot name.
7. Make additional changes to the virtual machine.
8. Open the Snapshot Manager and select the saved snapshot.
9. Click Go To to restore the previous version.
10. Verify that the virtual machine has returned to its earlier state.

Output

Result

Thus, a snapshot was successfully created in VMware Workstation, and the previous state of the virtual machine was restored and verified.
